

UpLib Scan Separator Sheet

This is the scan separator sheet for UpLib scan jobs. If you wish to scan multiple documents in a batch, you can slip one of these sheets in between each document in the job and the UpLib document incorporation process will find the sheets, and split the scan job at each sheet. There's a lot of text on this page, but that's so that the optical character recognition engine which looks at it will recognize it as more or less normal English text, and will have better accuracy in correctly recognizing words on the page.
